

Nutrition Security and Food Access

Local and Regional Food Systems (LRFS) Data Warehouse Project

Overview

This document is one component in the creation of a Local and Regional Food Systems (LRFS) Data Warehouse to support thriving and informed local and regional food sectors. Teams of researchers and community partners reviewed and compiled available data using an equity lens into a single data warehouse to facilitate analysis and visualization.

Our LRFS Data Warehouse contains data indicators related to nutrition and food access that can help researchers, practitioners, and policymakers better understand which households and communities have reliable access to nutritious and affordable food, and where access might be limited.

These data include:

- **Federal nutrition assistance program data**, which document eligibility and participation in federal nutrition assistance programs. Data may be used to understand areas where program eligibility and participation is highest and where rates can be improved.
- **Food purchase data**, which document household food acquisition- including types of food purchased and sources of payment. Data may be used to understand how household income influences food shopping behavior.
- **Food store data**, which document access to grocery stores, types of food retail in communities, and store acceptance of WIC and SNAP. Data may be used to understand where areas of low supermarket access exist, how access to transportation impacts food purchasing, and where there are opportunities for increased food sources.
- **Food preparation data**, which document household access to kitchen equipment, time spent on food preparation, and time spent commuting and working outside the home. Data may be used to understand which households lack the time and equipment often needed to prepare nutritious meals.
- **Food insecurity data**, which document rates of food insecurity among households and special populations. Data may be used to understand how food insecurity rates vary by age, race, and geography.
- **Population characteristic data**, which document income level, disability status, households with children, older adults, and school enrollment, and other factors that impact eligibility for federal nutrition assistance programs.

Narrative Matters - Working towards racial equity

Not all households have the same opportunities to make healthy food choices.

Black, Indigenous, and People of Color households are disproportionately affected by barriers to nutrition and food access which can result from community conditions whereby neighborhoods lack healthy food retail, public transit, and well-funded public school systems; working conditions whereby wages are low, hours are long, and places of employment lack healthy food options; generational wealth gaps whereby high rental housing costs and low savings rates make it difficult to weather financial emergencies; or discrimination by social service providers, whereby households are denied enrollment in income and food subsidy programs.

Site users are encouraged to acknowledge the systemic factors that influence household nutrition and food access, and to seek out opportunities to support policy and program changes that improve access for all households. When presenting data, we encourage disaggregation by individual race, ethnicity, and cultural group wherever possible. Aggregation of data can mask important differences that might be relevant for understanding needs and crafting adequate program and policy solutions. We also encourage the use of practices that invite community members to help contextualize data, share their personal stories, and amplify community solutions.

The following data are included in the data warehouse. While there are certainly more data on this topic, these data sets are national in scope, complete, and publicly available. We expect that more data will be submitted and added to the warehouse upon its release.

Additional Measures

Expanded access to data is important for understanding conditions related to nutrition and food access. Listed here are additional data indicators that are recommended for inclusion, at the community-level. If these data become available, it is recommended that they be added to the data warehouse. Check out the project website for additional information about how to submit suggestions and additions to the warehouse.

Community Assets

Number of Food pantry sites
Number and Type of Alternative transit access

Food Quality

Number of Dollar stores
Measure of fresh produce quality

Populations Affected

Number of Formerly incarcerated adults and their children
Number of Residents without citizenship status
Number of Food workers who experience hunger

Federal Nutrition Assistance Programs

National School Lunch Program participation rates for schools
School Breakfast Program participation rates for schools
Community Eligibility Provision participation rates for schools
WIC eligibility and participation rates for households
